

Length	Objectives	Chapter(s)	Activities
Unit 1 3 days September	<p><b>P2.1A</b> Calculate the average speed of an object using the change of position and elapsed time.</p> <p><b>P2.1B</b> Represent the velocities for linear and circular motion using motion diagrams (arrows on strobe pictures).</p> <p><b>P2.1C</b> Create line graphs using measured values of position and elapsed time.</p> <p><b>P2.1D</b> Describe and analyze the motion that a position-time graph represents, given the graph.</p> <p><b>P2.1h</b> Identify the changes in speed and direction in everyday examples of circular (rotation and revolution), periodic, and projectile motions.</p>	Chapter 1,2,4	Labs, test, HW
Unit 2 4 days September	<p><b>P2.1E</b> Describe and classify various motions in a plane as one dimensional, two dimensional, circular, or periodic.</p> <p><b>P2.1F</b> Distinguish between rotation and revolution and describe and contrast the two speeds of an object like the Earth.</p> <p><b>P2.1g</b> Solve problems involving average speed and constant acceleration in one dimension.</p> <p><b>P2.2A</b> Distinguish between the variables of distance, displacement, speed, velocity, and acceleration.</p> <p><b>P2.2B</b> Use the change of speed and elapsed time to calculate the average acceleration for linear motion.</p> <p><b>P2.2C</b> Describe and analyze the motion that a velocity-time graph represents, given the graph.</p> <p><b>P2.2e</b> Use the area under a velocity-time graph to calculate the distance traveled and the slope to calculate the acceleration.</p> <p><b>P2.3a</b> Describe and compare the motion of an object using different reference frames.</p>	Chapter 3	Labs, test, HW

<p>Unit 3 5 days September</p>	<p><b>P3.1A</b> Identify the force(s) acting between objects in “direct contact” or at a distance.  <b>P3.1d</b> Identify the basic forces in everyday interactions.  <b>P3.2A</b> Identify the magnitude and direction of everyday forces (e.g., wind, tension in ropes, pushes and pulls, weight).  <b>P3.2C</b> Calculate the net force acting on an object.  <b>P3.2d</b> Calculate all the forces on an object on an inclined plane and describe the object’s motion based on the forces using free-body diagrams.  <b>P3.4A</b> Predict the change in motion of an object acted on by several forces.  <b>P3.4B</b> Identify forces acting on objects moving with constant velocity (e.g., cars on a highway).  <b>P3.4C</b> Solve problems involving force, mass, and acceleration in linear motion (Newton’s second law).</p>	<p>Chapter 4</p>	<p>Labs, test, HW, group project</p>
<p>Unit 4 8 days September- October</p>	<p><b>P2.1h</b> Identify the changes in speed and direction in everyday examples of circular (rotation and revolution), periodic, and projectile motions.  <b>P3.1A</b> Identify the force(s) acting between objects in “direct contact” or at a distance.</p>	<p>Chapter 5</p>	<p>Labs, test, HW</p>
<p>Unit 5 8 days October</p>	<p><b>P2.2g</b> Apply the independence of the vertical and horizontal initial velocities to solve projectile motion problems.  <b>P3.4e</b> Solve problems involving force, mass, and acceleration in two-dimensional projectile motion restricted to an initial horizontal velocity with no initial vertical velocity (e.g., a ball rolling off a table).  <b>P3.4f</b> Calculate the changes in velocity of a thrown or hit object during and after the time it is acted on by the force.  <b>P3.4g</b> Explain how the time of impact can affect the net force (e.g., air bags in cars, catching a ball).</p>	<p>Chapter 6</p>	<p>Labs, test, HW</p>

<p>Unit 6 3 days October</p>	<p><b>P3.6A</b> Explain earth-moon interactions (orbital motion) in terms of forces.  <b>P3.6B</b> Predict how the gravitational force between objects changes when the distance between them changes.  <b>P3.6C</b> Explain how your weight on Earth could be different from your weight on another planet.  <b>P3.6d</b> Calculate force, masses, or distance, given any three of these quantities, by applying the Law of Universal Gravitation, given the value of <math>G</math>.  <b>P3.6e</b> Draw arrows (vectors) to represent how the direction and magnitude of a force changes on an object in an elliptical orbit.</p>	<p>Chapter 7</p>	<p>Labs, test, HW</p>
<p>Unit 7 4 days October</p>	<p><b>P2.1E</b> Describe and classify various motions in a plane as one dimensional, two dimensional, circular, or periodic.  <b>P2.1F</b> Distinguish between rotation and revolution and describe and contrast the two speeds of an object like the Earth.  <b>P2.1h</b> Identify the changes in speed and direction in everyday examples of circular (rotation and revolution), periodic, and projectile motions.  <b>P2.2D</b> State that uniform circular motion involves acceleration without a change in speed.  <b>P3.4D</b> Identify the force(s) acting on objects moving with uniform circular motion (e.g., a car on a circular track, satellites in orbit).</p>	<p>Chapter 8</p>	<p>Labs, test, HW</p>
<p>Unit 8 4 days October</p>	<p><b>P3.5a</b> Apply conservation of momentum to solve simple collision problems.</p>	<p>Chapter 9</p>	<p>Labs, test, HW</p>

<p>Unit 9 4 days November</p>	<p><b>P3.2B</b> Compare work done in different situations.</p> <p><b>P4.1c</b> Explain why work has a more precise scientific meaning than the meaning of work in everyday language.</p> <p><b>P4.1d</b> Calculate the amount of work done on an object that is moved from one position to another.</p> <p><b>P4.1e</b> Using the formula for work, derive a formula for change in potential energy of an object lifted a distance <math>h</math>.</p> <p><b>P4.3A</b> Identify the form of energy in given situations (e.g., moving objects, stretched springs, rocks on cliffs, energy in food).</p> <p><b>P4.3B</b> Describe the transformation between potential and kinetic energy in simple mechanical systems (e.g., pendulums, roller coasters, ski lifts).</p> <p><b>P4.3C</b> Explain why all mechanical systems require an external energy source to maintain their motion.</p> <p><b>P4.3d</b> Rank the amount of kinetic energy from highest to lowest of everyday examples of moving objects.</p> <p><b>P4.3e</b> Calculate the changes in kinetic and potential energy in simple mechanical systems (e.g., pendulums, roller coasters, ski lifts) using the formulas for kinetic energy and potential energy.</p> <p><b>P4.3f</b> Calculate the impact speed (ignoring air resistance) of an object dropped from a specific height or the maximum height reached by an object (ignoring air resistance), given the initial vertical velocity.</p>	<p>Chapter 10</p>	<p>Labs, test, HW</p>
<p>Unit 10 10 days November</p>	<p><b>P4.2A</b> Account for and represent energy transfer and transformation in complex processes (interactions).</p> <p><b>P4.2B</b> Name devices that transform specific types of energy into other types (e.g., a device that transforms electricity into motion).</p> <p><b>P4.2C</b> Explain how energy is conserved in common systems (e.g., light incident on a transparent material, light incident on a leaf, mechanical energy in a collision).</p> <p><b>P4.2D</b> Explain why all the stored energy in gasoline does not transform to mechanical energy of a vehicle.</p> <p><b>P4.2e</b> Explain the energy transformation as an object (e.g., skydiver) falls at a steady velocity.</p> <p><b>P4.2f</b> Identify and label the energy inputs, transformations, and outputs using</p>	<p>Chapter 11+12</p>	<p>Labs, test, HW</p>

	<p>qualitative or quantitative representations in simple technological systems (e.g., toaster, motor, hair dryer) to show energy conservation.</p> <p><b>P4.11a</b> Calculate the energy lost to surroundings when water in a home water heater is heated from room temperature to the temperature necessary to use in a dishwasher, given the efficiency of the home hot water heater.</p> <p><b>P4.11b</b> Calculate the final temperature of two liquids (same or different materials) at the same or different temperatures and masses that are combined.</p>
